Improvement item summary

High risk: 18

Medium risk: 28

Pillar	High risk	Medium risk
Operational Excellence	4	5
Security	2	7
Reliability	5	6
Performance Efficiency	4	0
Cost Optimization	3	5
Sustainability	0	5

High risk

Operational Excellence
• OPS 1.How do you determine what your priorities are? • OPS 2.How do you structure your organization to support your business outcomes? • OPS 3.How does your organizational culture support your business outcomes? • OPS 4.How do you implement observability in your workload?

Security
• SEC 1.How do you securely operate your workload? • SEC 11.How do you incorporate and validate the security properties of applications throughout the design, development, and deployment lifecycle?

Reliability
• REL 10.How do you use fault isolation to protect your workload? • REL 13.How do you plan for disaster recovery (DR)? • REL 5.How do you design interactions in a distributed system to mitigate or withstand failures? • REL 4.How do you design interactions in a distributed system to prevent failures? • REL 1.How do you manage service quotas and constraints?

Performance Efficiency
• PERF 1.How do you select the appropriate cloud resources and architecture patterns for your workload? • PERF 2.How do you select and use compute resources in your workload? • PERF 3.How do you store, manage, and access data in your workload? • PERF 4.How do you select and configure networking resources in your workload?

Cost Optimization
• COST 3.How do you monitor your cost and usage? • COST 5.How do you evaluate cost when you select services? • COST 8.How do you plan for data transfer charges?

Sustainability
No improvements identified

Medium risk

Operational Excellence
• OPS 5.How do you reduce defects, ease remediation, and improve flow into production? • OPS 7.How do you know that you are ready to support a workload? • OPS 8.How do you utilize workload observability in your organization? • OPS 10.How do you manage workload and operations events? • OPS 11.How do you evolve operations?

Security
• SEC 2.How do you manage identities for people and machines? • SEC 3.How do you manage permissions for people and machines? • SEC 4.How do you detect and investigate security events? • SEC 6.How do you protect your compute resources? • SEC 7.How do you classify your data? • SEC 8.How do you protect your data at rest? • SEC 10.How do you anticipate, respond to, and recover from incidents?

Reliability
• REL 6.How do you monitor workload resources? • REL 12.How do you test reliability? • REL 8.How do you implement change? • REL 11.How do you design your workload to withstand component failures? • REL 2.How do you plan your network topology? • REL 7.How do you design your workload to adapt to changes in demand?

Performance Efficiency
No improvements identified

Cost Optimization
• COST 1.How do you implement cloud financial management? • COST 2.How do you govern usage? • COST 6.How do you meet cost targets when you select resource type, size and number? • COST 7.How do you use pricing models to reduce cost? • COST 4.How do you decommission resources?

Sustainability
• SUS 2.How do you align cloud resources to your demand? • SUS 3.How do you take advantage of software and architecture patterns to support your sustainability goals? • SUS 4.How do you take advantage of data management policies and patterns to support your sustainability goals? • SUS 5.How do you select and use cloud hardware and services in your architecture to support your sustainability goals? • SUS 6.How do your organizational processes support your sustainability goals?

Operational Excellence

Questions answered

11/11

Question status

- High risk: 4
- Medium risk: 5
- No improvements identified: 2
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you determine what your priorities are?

High risk

Selected choice(s)

- Evaluate external customer needs
- Evaluate internal customer needs
- Evaluate threat landscape
- Evaluate tradeoffs while managing benefits and risks

Not selected choice(s)

- Evaluate governance requirements
- Evaluate compliance requirements
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Evaluate governance requirements
- Evaluate compliance requirements

Ask an expert

2. How do you structure your organization to support your business outcomes?

High risk

Selected choice(s)

- Resources have identified owners
- Processes and procedures have identified owners
- Operations activities have identified owners responsible for their performance
- Mechanisms exist to request additions, changes, and exceptions

Not selected choice(s)

- Mechanisms exist to manage responsibilities and ownership
- Responsibilities between teams are predefined or negotiated
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Mechanisms exist to manage responsibilities and ownership
- Responsibilities between teams are predefined or negotiated

Ask an expert

3. How does your organizational culture support your business outcomes?

High risk

Selected choice(s)

- Escalation is encouraged
- Communications are timely, clear, and actionable
- Team members are empowered to take action when outcomes are at risk
- Experimentation is encouraged
- Team members are encouraged to maintain and grow their skill sets

Not selected choice(s)

- Provide executive sponsorship
- Resource teams appropriately
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Provide executive sponsorship
- Resource teams appropriately

Ask an expert

4. How do you implement observability in your workload?

High risk

Selected choice(s)

- Identify key performance indicators
- Implement application telemetry
- Implement dependency telemetry
- Implement distributed tracing

Not selected choice(s)

- Implement user experience telemetry
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Implement user experience telemetry

Ask an expert

5. How do you reduce defects, ease remediation, and improve flow into production?

⚠ Medium risk

Selected choice(s)

- Use version control
- Test and validate changes
- Use configuration management systems
- Use build and deployment management systems
- Implement practices to improve code quality
- Use multiple environments
- Make frequent, small, reversible changes
- Fully automate integration and deployment

Not selected choice(s)

- Perform patch management
- Share design standards
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Perform patch management
- Share design standards

5. How do you reduce defects, ease remediation, and improve flow into production?
Ask an expert

6. How do you mitigate deployment risks?

No improvements identified

Selected choice(s)

- Plan for unsuccessful changes
- Test deployments
- Employ safe deployment strategies
- Automate testing and rollback

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

7. How do you know that you are ready to support a workload?

⚠ Medium risk

Selected choice(s)

- Ensure personnel capability
- Ensure a consistent review of operational readiness
- Use runbooks to perform procedures
- Use playbooks to investigate issues

Not selected choice(s)

- Make informed decisions to deploy systems and changes
- Create support plans for production workloads
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Make informed decisions to deploy systems and changes
- Create support plans for production workloads

Ask an expert

8. How do you utilize workload observability in your organization?

Medium risk

Selected choice(s)

- Create actionable alerts
- Analyze workload metrics
- Analyze workload logs
- Analyze workload traces

Not selected choice(s)

- Create dashboards
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Create dashboards

Ask an expert

9. How do you understand the health of your operations?

No improvements identified

Selected choice(s)

- Measure operations goals and KPIs with metrics
- Communicate status and trends to ensure visibility into operation
- Review operations metrics and prioritize improvement

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

10. How do you manage workload and operations events?

Medium risk

Selected choice(s)

- Use a process for event, incident, and problem management
- Have a process per alert
- Prioritize operational events based on business impact
- Define a customer communication plan for service-impacting events
- Communicate status through dashboards

Not selected choice(s)

- Define escalation paths
- Automate responses to events
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Define escalation paths
- Automate responses to events

Ask an expert

11. How do you evolve operations?

⚠ Medium risk

Selected choice(s)

- Have a process for continuous improvement
- Perform post-incident analysis
- Implement feedback loops
- Perform knowledge management

Not selected choice(s)

- Define drivers for improvement
- Validate insights
- Perform operations metrics reviews
- Document and share lessons learned
- Allocate time to make improvements
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Define drivers for improvement
- Validate insights
- Perform operations metrics reviews
- Document and share lessons learned
- Allocate time to make improvements

11. How do you evolve operations?
Ask an expert

Security

Questions answered

11/11

Question status

- High risk: 2
- Medium risk: 7
- No improvements identified: 2
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you securely operate your workload?

High risk

Selected choice(s)

- Separate workloads using accounts
- Secure account root user and properties
- Identify and validate control objectives
- Stay up to date with security threats and recommendations

Not selected choice(s)

- Identify and prioritize risks using a threat model
- Reduce security management scope
- Automate deployment of standard security controls
- Evaluate and implement new security services and features regularly
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Identify and prioritize risks using a threat model
- Reduce security management scope
- Automate deployment of standard security controls
- Evaluate and implement new security services and features regularly

Ask an expert

2. How do you manage identities for people and machines?

⚠ Medium risk

Selected choice(s)

- Use strong sign-in mechanisms
- Use temporary credentials
- Store and use secrets securely
- Rely on a centralized identity provider
- Audit and rotate credentials periodically

Not selected choice(s)

- Employ user groups and attributes
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Employ user groups and attributes

Ask an expert

3. How do you manage permissions for people and machines?

⚠ Medium risk

Selected choice(s)

- Define access requirements
- Grant least privilege access
- Establish emergency access process
- Reduce permissions continuously

Not selected choice(s)

- Define permission guardrails for your organization
- Manage access based on lifecycle
- Share resources securely within your organization
- Share resources securely with a third party
- Analyze public and cross account access
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Define permission guardrails for your organization
- Manage access based on lifecycle
- Share resources securely within your organization
- Share resources securely with a third party
- Analyze public and cross account access

3. How do you manage permissions for people and machines?
Ask an expert

4. How do you detect and investigate security events?

⚠ Medium risk

Selected choice(s)

- Configure service and application logging
- Capture logs, findings, and metrics in standardized locations
- Correlate and enrich security events

Not selected choice(s)

- Initiate remediation for non-compliant resources
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Initiate remediation for non-compliant resources

Ask an expert

5. How do you protect your network resources?

No improvements identified

Selected choice(s)

- Create network layers
- Control traffic within your network layers
- Implement inspection-based protection
- Automate network protection

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

6. How do you protect your compute resources?

Medium risk

Selected choice(s)

- Perform vulnerability management
- Provision compute from hardened images
- Validate software integrity
- Reduce manual management and interactive access

Not selected choice(s)

- Automate compute protection
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Automate compute protection

Ask an expert

7. How do you classify your data?

Medium risk

Selected choice(s)

- Understand your data classification scheme
- Apply data protection controls based on data sensitivity
- Define scalable data lifecycle management

Not selected choice(s)

- Automate identification and classification
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Automate identification and classification

Ask an expert

8. How do you protect your data at rest?

⚠ Medium risk

Selected choice(s)

- Implement secure key management
- Enforce encryption at rest
- Enforce access control

Not selected choice(s)

- Automate data at rest protection
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Automate data at rest protection

Ask an expert

9. How do you protect your data in transit?

No improvements identified

Selected choice(s)

- Implement secure key and certificate management
- Enforce encryption in transit
- Authenticate network communications

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

10. How do you anticipate, respond to, and recover from incidents?

Medium risk

Selected choice(s)

- Identify key personnel and external resources
- Develop incident management plans
- Prepare forensic capabilities
- Run simulations

Not selected choice(s)

- Develop and test security incident response playbooks
- Pre-provision access
- Establish a framework for learning from incidents
- Pre-deploy tools
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Develop and test security incident response playbooks
- Pre-provision access
- Establish a framework for learning from incidents
- Pre-deploy tools

Ask an expert

11. How do you incorporate and validate the security properties of applications throughout the design, development, and deployment lifecycle?

High risk

Selected choice(s)

- Perform regular penetration testing
- Train for application security
- Automate testing throughout the development and release lifecycle
- Conduct code reviews

Not selected choice(s)

- Deploy software programmatically
- Regularly assess security properties of the pipelines
- Centralize services for packages and dependencies
- Build a program that embeds security ownership in workload teams
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Deploy software programmatically
- Regularly assess security properties of the pipelines
- Centralize services for packages and dependencies
- Build a program that embeds security ownership in workload teams

11. How do you incorporate and validate the security properties of applications throughout the design, development, and deployment lifecycle?
Ask an expert

Reliability

Questions answered

13/13

Question status

- High risk: 5
- Medium risk: 6
- No improvements identified: 2
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you manage service quotas and constraints?

High risk

Selected choice(s)

- Aware of service quotas and constraints
- Accommodate fixed service quotas and constraints through architecture

Not selected choice(s)

- Manage service quotas across accounts and Regions
- Monitor and manage quotas
- Automate quota management
- Ensure that a sufficient gap exists between the current quotas and the maximum usage to accommodate failover
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Manage service quotas across accounts and Regions
- Monitor and manage quotas
- Automate quota management
- Ensure that a sufficient gap exists between the current quotas and the maximum usage to accommodate failover

Ask an expert

2. How do you plan your network topology?

⚠ Medium risk

Selected choice(s)

- Use highly available network connectivity for your workload public endpoints
- Provision redundant connectivity between private networks in the cloud and on-premises environments
- Ensure IP subnet allocation accounts for expansion and availability
- Prefer hub-and-spoke topologies over many-to-many mesh

Not selected choice(s)

- Enforce non-overlapping private IP address ranges in all private address spaces where they are connected
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Enforce non-overlapping private IP address ranges in all private address spaces where they are connected

Ask an expert

3. How do you design your workload service architecture?

No improvements identified

Selected choice(s)

- Choose how to segment your workload
- Build services focused on specific business domains and functionality

Not selected choice(s)

- Provide service contracts per API
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

4. How do you design interactions in a distributed system to prevent failures?

High risk

Selected choice(s)

- Implement loosely coupled dependencies
- Make mutating operations idempotent
- Do constant work

Not selected choice(s)

- Identify the kind of distributed systems you depend on
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Identify the kind of distributed systems you depend on

Ask an expert

5. How do you design interactions in a distributed system to mitigate or withstand failures?

High risk

Selected choice(s)

- Implement graceful degradation to transform applicable hard dependencies into soft dependencies
- Throttle requests
- Fail fast and limit queues

Not selected choice(s)

- Control and limit retry calls
- Set client timeouts
- Make systems stateless where possible
- Implement emergency levers
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Control and limit retry calls
- Set client timeouts
- Make systems stateless where possible
- Implement emergency levers

5. How do you design interactions in a distributed system to mitigate or withstand failures?
Ask an expert

6. How do you monitor workload resources?

Medium risk

Selected choice(s)

- Monitor all components for the workload (Generation)
- Define and calculate metrics (Aggregation)
- Send notifications (Real-time processing and alarming)
- Regularly review monitoring scope and metrics

Not selected choice(s)

- Automate responses (Real-time processing and alarming)
- Analyze logs
- Monitor end-to-end tracing of requests through your system
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Automate responses (Real-time processing and alarming)
- Analyze logs
- Monitor end-to-end tracing of requests through your system

Ask an expert

7. How do you design your workload to adapt to changes in demand?

Medium risk

Selected choice(s)

- Use automation when obtaining or scaling resources
- Obtain resources upon detection of impairment to a workload
- Load test your workload

Not selected choice(s)

- Obtain resources upon detection that more resources are needed for a workload
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Obtain resources upon detection that more resources are needed for a workload

Ask an expert

8. How do you implement change?

Medium risk

Selected choice(s)

- Use runbooks for standard activities such as deployment
- Integrate functional testing as part of your deployment
- Deploy using immutable infrastructure
- Deploy changes with automation

Not selected choice(s)

- Integrate resiliency testing as part of your deployment
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Integrate resiliency testing as part of your deployment

Ask an expert

9. How do you back up data?

No improvements identified

Selected choice(s)

- Identify and back up all data that needs to be backed up, or reproduce the data from sources
- Secure and encrypt backups
- Perform data backup automatically
- Perform periodic recovery of the data to verify backup integrity and processes

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

10. How do you use fault isolation to protect your workload?

High risk

Selected choice(s)

- Deploy the workload to multiple locations
- Automate recovery for components constrained to a single location

Not selected choice(s)

- Use bulkhead architectures to limit scope of impact
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Use bulkhead architectures to limit scope of impact

Ask an expert

11. How do you design your workload to withstand component failures?

⚠ Medium risk

Selected choice(s)

- Monitor all components of the workload to detect failures
- Fail over to healthy resources
- Automate healing on all layers
- Send notifications when events impact availability

Not selected choice(s)

- Rely on the data plane and not the control plane during recovery
- Use static stability to prevent bimodal behavior
- Architect your product to meet availability targets and uptime service level agreements (SLAs)
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Rely on the data plane and not the control plane during recovery
- Use static stability to prevent bimodal behavior
- Architect your product to meet availability targets and uptime service level agreements (SLAs)

11. How do you design your workload to withstand component failures?
Ask an expert

12. How do you test reliability?

⚠ Medium risk

Selected choice(s)

- Use playbooks to investigate failures
- Perform post-incident analysis
- Test scalability and performance requirements
- Test resiliency using chaos engineering

Not selected choice(s)

- Conduct game days regularly
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Conduct game days regularly

Ask an expert

13. How do you plan for disaster recovery (DR)?

High risk

Selected choice(s)

- Define recovery objectives for downtime and data loss
- Use defined recovery strategies to meet the recovery objectives
- Test disaster recovery implementation to validate the implementation

Not selected choice(s)

- Manage configuration drift at the DR site or Region
- Automate recovery
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Manage configuration drift at the DR site or Region
- Automate recovery

Ask an expert

Performance Efficiency

Questions answered

5/5

Question status

- High risk: 4
- Medium risk: 0
- No improvements identified: 1
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you select the appropriate cloud resources and architecture patterns for your workload?

High risk

Selected choice(s)

- Learn about and understand available cloud services and features
- Factor cost into architectural decisions
- Use a data-driven approach for architectural choices

Not selected choice(s)

- Evaluate how trade-offs impact customers and architecture efficiency
- Use guidance from your cloud provider or an appropriate partner to learn about architecture patterns and best practices
- Use policies and reference architectures
- Use benchmarking to drive architectural decisions
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Evaluate how trade-offs impact customers and architecture efficiency
- Use guidance from your cloud provider or an appropriate partner to learn about architecture patterns and best practices
- Use policies and reference architectures
- Use benchmarking to drive architectural decisions

1. How do you select the appropriate cloud resources and architecture patterns for your workload?
Ask an expert

2. How do you select and use compute resources in your workload?

High risk

Selected choice(s)

- Select the best compute options for your workload
- Collect compute-related metrics
- Understand the available compute configuration and features

Not selected choice(s)

- Scale your compute resources dynamically
- Configure and right-size compute resources
- Use optimized hardware-based compute accelerators
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Scale your compute resources dynamically
- Configure and right-size compute resources
- Use optimized hardware-based compute accelerators

Ask an expert

3. How do you store, manage, and access data in your workload?

High risk

Selected choice(s)

- Use purpose-built data store that best support your data access and storage requirements
- Evaluate available configuration options for data store

Not selected choice(s)

- Collect and record data store performance metrics
- Implement strategies to improve query performance in data store
- Implement data access patterns that utilize caching
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Collect and record data store performance metrics
- Implement strategies to improve query performance in data store
- Implement data access patterns that utilize caching

Ask an expert

4. How do you select and configure networking resources in your workload?

High risk

Selected choice(s)

- Understand how networking impacts performance
- Evaluate available networking features
- Use load balancing to distribute traffic across multiple resources
- Choose your workload's location based on network requirements
- Optimize network configuration based on metrics

Not selected choice(s)

- Choose appropriate dedicated connectivity or VPN for your workload
- Choose network protocols to improve performance
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Choose appropriate dedicated connectivity or VPN for your workload
- Choose network protocols to improve performance

Ask an expert

5. What process do you use to support more performance efficiency for your workload?

No improvements identified

Selected choice(s)

- Establish key performance indicators (KPIs) to measure workload health and performance
- Use monitoring solutions to understand the areas where performance is most critical
- Define a process to improve workload performance
- Review metrics at regular intervals
- Use automation to proactively remediate performance-related issues
- Keep your workload and services up-to-date

Not selected choice(s)

- Load test your workload
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

Cost Optimization

Questions answered

11/11

Question status

- High risk: 3
- Medium risk: 5
- No improvements identified: 3
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you implement cloud financial management?

⚠ Medium risk

Selected choice(s)

- Establish ownership of cost optimization
- Establish a partnership between finance and technology
- Establish cloud budgets and forecasts
- Implement cost awareness in your organizational processes

Not selected choice(s)

- Monitor cost proactively
- Keep up-to-date with new service releases
- Quantify business value from cost optimization
- Report and notify on cost optimization
- Create a cost-aware culture
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Monitor cost proactively
- Keep up-to-date with new service releases
- Quantify business value from cost optimization
- Report and notify on cost optimization
- Create a cost-aware culture

1. How do you implement cloud financial management?
Ask an expert

2. How do you govern usage?

Medium risk

Selected choice(s)

- Develop policies based on your organization requirements
- Implement goals and targets
- Implement an account structure

Not selected choice(s)

- Implement cost controls
- Implement groups and role
- Track project lifecycle
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Implement cost controls
- Implement groups and role
- Track project lifecycle

Ask an expert

3. How do you monitor your cost and usage?

High risk

Selected choice(s)

- Configure detailed information sources
- Identify cost attribution categories
- Configure billing and cost management tools
- Add organization information to cost and usage
- Allocate costs based on workload metrics

Not selected choice(s)

- Establish organization metrics
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Establish organization metrics

Ask an expert

4. How do you decommission resources?

Medium risk

Selected choice(s)

- Track resources over their life time
- Implement a decommissioning process
- Decommission resources automatically

Not selected choice(s)

- Decommission resources
- Enforce data retention policies
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Decommission resources
- Enforce data retention policies

Ask an expert

5. How do you evaluate cost when you select services?

High risk

Selected choice(s)

- Identify organization requirements for cost
- Analyze all components of this workload

Not selected choice(s)

- Perform a thorough analysis of each component
- Select components of this workload to optimize cost in line with organization priorities
- Perform cost analysis for different usage over time
- Select software with cost effective licensing
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Perform a thorough analysis of each component
- Select components of this workload to optimize cost in line with organization priorities
- Perform cost analysis for different usage over time
- Select software with cost effective licensing

Ask an expert

6. How do you meet cost targets when you select resource type, size and number?

Medium risk

Selected choice(s)

- Perform cost modeling
- Select resource type, size, and number automatically based on metrics

Not selected choice(s)

- Select resource type, size, and number based on data
- Consider using shared resources
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Select resource type, size, and number based on data
- Consider using shared resources

Ask an expert

7. How do you use pricing models to reduce cost?

Medium risk

Selected choice(s)

- Perform pricing model analysis
- Choose Regions based on cost

Not selected choice(s)

- Select third-party agreements with cost-efficient terms
- Implement pricing models for all components of this workload
- Perform pricing model analysis at the management account level
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Select third-party agreements with cost-efficient terms
- Implement pricing models for all components of this workload
- Perform pricing model analysis at the management account level

Ask an expert

8. How do you plan for data transfer charges?

High risk

Selected choice(s)

- Implement services to reduce data transfer costs

Not selected choice(s)

- Perform data transfer modeling
- Select components to optimize data transfer cost
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Perform data transfer modeling
- Select components to optimize data transfer cost

Ask an expert

9. How do you manage demand, and supply resources?

No improvements identified

Selected choice(s)

- Perform an analysis on the workload demand
- Implement a buffer or throttle to manage demand
- Supply resources dynamically

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

10. How do you evaluate new services?

No improvements identified

Selected choice(s)

- Develop a workload review process
- Review and analyze this workload regularly

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

11. How do you evaluate the cost of effort?

No improvements identified

Selected choice(s)

- Perform automation for operations

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

Questions answered

6/6

Question status

- High risk: 0
- Medium risk: 5
- No improvements identified: 1
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

1. How do you select Regions for your workload?

No improvements identified

Selected choice(s)

- Choose Region based on both business requirements and sustainability goals

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

No risk detected for this question. No action needed.

2. How do you align cloud resources to your demand?

⚠ Medium risk

Selected choice(s)

- Scale workload infrastructure dynamically
- Stop the creation and maintenance of unused assets
- Implement buffering or throttling to flatten the demand curve

Not selected choice(s)

- Align SLAs with sustainability goals
- Optimize geographic placement of workloads based on their networking requirements
- Optimize team member resources for activities performed
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Align SLAs with sustainability goals
- Optimize geographic placement of workloads based on their networking requirements
- Optimize team member resources for activities performed

Ask an expert

3. How do you take advantage of software and architecture patterns to support your sustainability goals?

⚠ Medium risk

Selected choice(s)

- Optimize software and architecture for asynchronous and scheduled jobs
- Use software patterns and architectures that best support data access and storage patterns

Not selected choice(s)

- Remove or refactor workload components with low or no use
- Optimize areas of code that consume the most time or resources
- Optimize impact on devices and equipment
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Remove or refactor workload components with low or no use
- Optimize areas of code that consume the most time or resources
- Optimize impact on devices and equipment

Ask an expert

4. How do you take advantage of data management policies and patterns to support your sustainability goals?

Medium risk

Selected choice(s)

- Use technologies that support data access and storage patterns
- Use policies to manage the lifecycle of your datasets
- Remove unneeded or redundant data
- Minimize data movement across networks

Not selected choice(s)

- Implement a data classification policy
- Use shared file systems or storage to access common data
- Back up data only when difficult to recreate
- Use elasticity and automation to expand block storage or file system
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Implement a data classification policy
- Use shared file systems or storage to access common data
- Back up data only when difficult to recreate
- Use elasticity and automation to expand block storage or file system

4. How do you take advantage of data management policies and patterns to support your sustainability goals?
Ask an expert

5. How do you select and use cloud hardware and services in your architecture to support your sustainability goals?

⚠ Medium risk

Selected choice(s)

- Use the minimum amount of hardware to meet your needs
- Use instance types with the least impact
- Use managed services

Not selected choice(s)

- Optimize your use of hardware-based compute accelerators
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Optimize your use of hardware-based compute accelerators

Ask an expert

6. How do your organizational processes support your sustainability goals?

Medium risk

Selected choice(s)

- Adopt methods that can rapidly introduce sustainability improvements
- Keep your workload up-to-date

Not selected choice(s)

- Communicate and cascade your sustainability goals
- Increase utilization of build environments
- Use managed device farms for testing
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

- Communicate and cascade your sustainability goals
- Increase utilization of build environments
- Use managed device farms for testing

Ask an expert
